Please note in the space provided above the relative service information of the model and the retailer from whom you purchased your Infinity Wash XL. This information will assist us in answering any technical enquiries with the utmost speed and accuracy.

**WARNING:** the security of the fixture is granted only if these instructions are strictly followed; therefore it is absolutely necessary to keep this manual.

14. **Frequently asked questions**
Congratulations on having purchased a Coemar product. You have assured yourself of a fixture of the highest quality, both in compo-
nentry and in the technology used. We renew our invitation to you to complete the service information on the previous page, to expede-
t any request for service information or spares (in case of problems encountered either during, or subsequent to, installation). This
information will assist in providing prompt and accurate advice from your Coemar service centre.
Following the instructions and procedures outlined in this manual will ensure the maximum efficiency of this product for years to come.

1. Packaging and transportation

1.1. Packaging
Open the packaging and ensure that no part of the equipment has suffered damage in transit. In case of damage to the equipment, contact your carrier immediately by telephone or fax, following this with formal notification in writing.

Packing list
Ensure the packaging contains:
1 Infinity Wash XL
1 instruction manual
2 cam-lock support brackets

1.2. Transportation
The Infinity Wash XL should be transported in its original packaging or in an appropriate flight case.

2. General information

2.1. Important safety information
Fire prevention:
1. Infinity Wash XL utilises a Philips MSR GOLD 1200 SA/SE FastFit; the use of any alternative lamp is not recommended and will
null and void the fixture’s warranty.
2. Never locate the fixture on any flammable surface.
3. Minimum distance from flammable materials: 0.5 m.
4. Minimum distance from the closest illuminable surface: 2 m.
5. Replace any blown or damaged fuses only with those of identical values. Refer to the schematic diagram if there is any doubt.
6. Connect the projector to mains power via a thermal magnetic circuit breaker.

Preventing electric shock:
1. High voltage is present in the internals of the unit. Isolate the projector from mains supply prior to performing any function which
involves touching the internals of the unit, including lamp replacement.
2. For mains connection, adhere strictly to the guidelines outlined in this manual.
3. The level of technology inherent in the Infinity Wash XL requires the use of specialised personnel for all service applications; refer all
work to your authorised Coemar service centre.
4. A good earth connection is essential for proper functioning of the projector.
5. Mains cables should not come into contact with other cables. Never operate the unit without proper earth connection.
6. Do not operate the projector with wet hands or in an area where water present.
7. The fixture should never be located in an exposed position, or in areas of extreme humidity. A steady supply of circulating air is essential.

Protection against ultraviolet radiation:
1. Never turn on the lamp if any of the lenses, filters, or the carbon fibre housing is damaged; their respective functions will only operate
efficiently if they are in perfect working order.
2. Never look directly into the lamp when it is operating.

Safety:
1. The projector should always be installed with bolts, clamps, and other fixings which are suitably rated to support the weight of the unit.
2. Always use a secondary safety chain of a suitable rating to sustain the weight of the unit in case of the failure of the primary fixing point.
3. The external surface of the unit, at various points, may exceed 150°C. Never handle the unit until at least 10 minutes have elapsed
since the lamp was turned off.
4. Always replace the lamp if any physical damage is evident.
5. Never install the fixture in an enclosed area lacking sufficient air flow; the ambient temperature should not exceed 35°C.
6. Wait at least 10 minutes after the unit has been turned off prior to attempting to replace the lamp.
7. The projector contains electronic and electrical components which should under no circumstances be exposed to contact with water,
oil or any other liquid. Failure to do so will compromise the proper functioning of the projector.

Articulated movement
The projector has a pan range of 540° in its base and a tilt range 262° in its yoke; do not obstruct the projector whilst it is undertaking
articulated movement.

Forced ventilation
You will note several air vents on the body of the projector. To avoid any problems associated with overheating, never obstruct any of
these vents as this may seriously compromise the proper operation of the unit.

Protection rating against penetration by external agents:
1. The fixture is classified ordinary apparatus; its protection grade against penetration by external agents, solid or liquid, is IP 20.
2.2. Warranty conditions
1. The fixture is guaranteed for a period of 12 months from the date of purchase against manufacturing or materials defects.
2. The warranty does not extend to damage caused by inappropriate usage or use by inexperienced operators.
3. The warranty is immediately void if the projector has been operated or dismantled by unauthorised personnel.
4. The warranty does not extend to fixture replacement.
5. The serial number of the projector is required for any advice or service from your authorised Coemar service centre.

2.3. CE norms
The projector meets or exceeds all applicable CE requirements.

3. Product specifications

3.1. Technical characteristics
- Power: 200/208/230/240 Vac 50/60Hz
- Nominal current: 8A
- Maximum current: 10A
- Power factor: cos $\phi$ = 0.9
- Lamp wattage: 1200W MH
- Maximum ambient temperature: 35°C / 95° F
- Weight: 45.5 Kg / 100.1 Lbs
- IP rating: IP20

3.2. Dimensions

3.3. Components

Component description
- A. Body housing
- B. Zoom effect group
- C. Color wheel group
- D. Colors changer group
- E. Reflector group
- F. Yoke
- G. Base housing
- H. Base
4.1. Mechanical installation

Infinity Wash XL may be either floor or ceiling mounted. For floor mounting, the unit is provided with four rubber mounting feet. For ceiling mounted installations, Coemar includes two cam-lock (A) support brackets. The two cam-lock brackets may be mounted in 3 different positions (B, C and D) on the base of the Infinity Wash XL. The cam-lock brackets are affixed via a 1/4 nut. Please ensure that they are correctly seated and firmly tightened into position.

For ceiling mounted installations we suggest the use of appropriate clamps or fixings to attach the fixture to the mounting surface. Clamps may be attached to the central hole provided in the cam-lock brackets, as shown in the following diagram.

ATTENTION!!
Ensure that the structure from which the unit is hung is of sufficient rating to hold the weight of the unit, as are any clamps, nuts and bolts used to hang the unit.

The structure from which the unit is hung should be of sufficient rating to hold the weight of the unit, as should any clamps used to hang the unit. The structure should also be sufficiently rigid so as not to move or shake whilst the projector moves during its operation. Do not install the projector in locations where it is readily accessible by unauthorized or untrained personnel.

4.2. Safety connections

If the Infinity Wash XL is affixed to a structure the use of a safety chain designed to meet relevant safety standards is recommended. You may attach the safety chain to the holes "E" located on the base of the fixture and to the structure itself. If using an after-market safety chain not manufactured by Coemar, ensure that it is of sufficient rating to hold the weight of the unit.
5.1. Operating voltage and frequency

The projector may operate at voltages of 200, 208, 230 or 240VAC at a frequency of 50 or 60Hz. Coemar presets (barring specific requests) a voltage of 230v at a frequency of 50Hz. The preset voltage is indicated on the base of the projector.

Infinity Wash XL will automatically adjust its operation to suit a frequency of 50Hz or 60Hz.

5.2. Altering the operating voltage [Reserved for technical personnel only]

If the factory preset operating voltage do not correspond to those in use in your country of operation, you may alter the settings as described in the following paragraphs.

**ATTENTION!!**

Incorrect selection of operating voltage will seriously compromise the functioning of the projector and will immediately void the warranty.

1. Loosen the screws “A” on the cover of the base of the unit, as shown in the diagram below, using an appropriate screwdriver, thereby removing the cover completely and allowing access to the internal components of the base of the Infinity Wash XL.

2. Locate the main selector in the base of the unit.

3. Select a voltage from amongst 200, 208, 230 or 240V by moving the selector to the correct voltage.

4. When you have made changes, note these on the outside of the Infinity Wash XL.

5. Replace and fasten all the housings as per their original positions.
5.3. Mains connection

Mains cable characteristics
The mains cable provided is thermally resistant, complying to the most recent international standards. It meets or exceeds VDE and IEC norms, IEC 331, IEC 332 3C, CEI 20 35.
NB: In case of cable replacement, similar cable with comparable thermal resistant qualities must be used exclusively (cable 3x1.5 ø external 10 mm, rated 300/500V, tested to 2KV, operating temperature -40° +180°, Coemar cod. CV5309).

Connecting to mains power
For connection purposes, ensure your plug is of a suitable rating to sustain the maximum current:
• 200/208/230/240Vac 4.5 amps constant current in normal operation

Locate the mains cable which exits the base of the unit and connect as shown below:

ATTENTION!!
• The use of a thermal magnetic circuit breaker is recommended for each projector. Strict adherence to all regulatory norms is highly recommended.
• Infinity Wash XL should never be supplied mains power via a Dimmer; this is potentially dangerous.
• Prior to powering up the projector, ensure that the model in your possession correctly matches the mains supply available to you.
• A good earth connection is essential for the correct operation of the Infinity Wash XL. Never connect the projector to main power if the green/yellow earth cable is not correctly connected
• All cable and plug connections should be carried out by fully qualified and licenced personnel only.
6. DMX signal connection

Control signal is digital and is transmitted via two pair screened ø0.5mm cable as per international standards for the transmission of DMX512 data. Connection is serial, utilising XLR3 and XLR5, male and female sockets located on the base of the Infinity Wash XL, labelled **DMX 512 IN** and **OUT** (see diagram).

Plug/socket connections for XLR3 and XLR5 connectors:
Pin connections conform to the international standard as per the following table:

- pin 1 = GND
- pin 2 = data -
- pin 3 = data +

If using a controller which output signal via an XLR 5 (5 pin) socket, do not use pins 4 and 5, leave them unconnected.

**ATTENTION!!**

Ensure that all data conductors are isolated from one another and the metal housing of the connector.
Pin number 1 should never be connected to the device's power supply.
7. Turning on the projector

After having followed the preceding steps, turn on the projector via the main Power switch. The display and will show in sequence the software version installed in the 3 onboard microprocessors - the display “D” and the two master “A” and “B”.

For example, upon turning on power, the Infinity Wash XL may show:

D1.02 (display pcb “D” software version)
A1.03 (master pcb “A” software version)
B1.00 (master pdb “B” software version)

The projector will perform a reset function on all the internal and external motors. This will last some few seconds, after which it will be subject to the external signal from the controller. The display will remain fixed on indicating correct DMX 512 signal reception.

If the display flashed, there is no DMX signal being received. Check your cabling and your controller.

7.1. DMX addressing

Each projector utilises 22 channels of DMX 512 for complete control (for further information, see section 7.2. DMX functions).

DMX addresses

To ensure that each projector accesses the correct signal, it is necessary to correctly address each fixture. This procedure must be carried out on every projector being used. When powered up initially, each projector will show A001 which indicates DMX address 001; a projector thus addressed will respond to commands on channel 1 to 22 from your DMX controller. A second unit should be addressed as A023, a third as A045 and so on until the final projector has been addressed.

Altering DMX addresses

1. Press the + or - buttons until the display shows the required DMX address. The characters in the display will flash to indicate that the selection is not yet stored in memory.

2. Press the enter button to confirm your selection. The display panel will cease to flash and the projector will now respond to the new DMX 512 address.

Important Note: holding down the + or - buttons will cause the display to alter at an increased speed, allowing a faster selection to be made.

ATTENTION!!

If you alter the DMX with no DMX controller connected, the characters in the display panel will continue to flash even after you have pressed the ENTER button.

</table>

**Note 1:** the display panel may be used to disable the switching off of the lamp via DMX.

**Note 2:** turning off the lamp and all reset functions are delayed by 6 seconds to prevent accidental activation.

**Note 3:** the lamp on/off function can only be effected if an opposite level is set.
8. Display panel functions

The display panel of the Infinity Wash XL shows all the functions available; it is possible to change some of those parameters and to add some functions.

Changing the preset settings made by Coemar can vary the functions of the device so that it may not respond to a DMX 512 controller being used to control it. Carefully follow the instructions before applying any variations or selections.

NOTE: the symbol ☞ shows which key has to be pushed to obtain the desired function.

8.1. Quick guide to menu navigation

For your convenience, the following is a guide to navigating the menu system of the projector.
The internal microprocessor of the *Infinity Wash XL* allows for several diagnostic and output parameters to be displayed. You may record, in this menu, the position in which the projector will come to rest when turned on with no DMX signal attached.

### 8.2. Measure and test (MEAS)

To record the position of the unit and of its internal components, if DMX signal is not applied, the recorded setting will appear only in the menu when the unit is switched on.
8.3. Function settings (FUNC)

The projector allows the altering of several functions and for selecting personalised settings.

8.4. Rapid scrolling

Via the **Infinity Wash XL** display it is possible to rapidly scroll through the various numbers displayed in the menu in the following manner:

1. Pressing the ✩ or ✨ buttons will cause the number to scroll more quickly.
2. Pressing and holding the ✩ button and then the ✨ button will cause the numbers to jump to the highest value.
3. Pressing and holding the ✨ button and then the ✩ button will cause the numbers to jump to the lowest value.
8.5. Connecting the DR1

All the functions available via the display menu are also available via the DR1 (cod. 9703). The DR1 is a remote device designed for technical users who need to perform tasks on the projectors whilst they may be located in inaccessible positions. It acts as a remote control.

For example, the DR1 eliminates the need for climbing up truss structures to gain direct physical access to the projector to alter such parameters as DMX address, reading outputs such as lamp life as well as all other functions available via the digital display unit on the projector.

In order to utilise the DR1 remote device, you must first activate the identifying number of the projector ID, which must be unique in the particular DMX universe in which it is currently installed.

The method for setting an identification number ID is shown below.

For further information, consult the DR1 instruction manual.

8.6. Turning on the projector with no articulated movement

This function may be useful should you need to power up the Infinity Wash XL whilst it is in its flight case or to re-address it or alter any parameters and you wish to in the absence of any articulated movement.

1. Turn on the projector whilst holding down the enter, menu and – buttons

The projector will proceed with a reset of all its motors with the exception of those which control articulated movement, the pan and tilt motors, which remain static.

2. You may alter the DMX address or any other parameter without any articulated movement occurring

3. To return to normal functioning of the Infinity Wash XL simply turn the projector off and on via the Power switch or activate the Reset function.

8.7. Resetting the counter

The lamp life counter needs to be reset to zero at every lamp change to provide accurate information on lamp life.

When turning on the Infinity Wash XL, simultaneously hold down the + and – buttons. The projector will restart with its counter reset.

The projector has reset the LIFE counter. To verify that this operation has occurred:

1. Press the menu button and then press enter.

2. Press the + or - buttons until MEAS is displayed, then press enter.

3. Press the + or - buttons until HOUR (hours) is displayed, then press enter.

4. Press the + or - buttons until LIFE (lamp life) is displayed, then press enter.

5. If the display shows 0000, the counter has been reset.

N.B. You may also wish to verify that other electronic counters such as LIFS (total lamp operating lives) and UNIT (total projector operating life) have remained unaltered.
The Infinity WashXL utilises the Philips MSR GOLD 1200 SA/SE FastFit with PGJ50 base lamps. The use power is 1400W. These lamps are available via your Coemar distributor or service centre.

**ATTENTION!!**

Disconnect the unit from mains power prior to attempting lamp installation or replacement
Make sure the projector is sufficiently cooled.

The fixture’s internal temperature can reach 250° C after 5 minutes, with a maximum peak of 450° C; ensure that the lamp is cold prior to attempting removal. The fixture should be allowed to stand and cool for 10 minutes prior to its removal. The lamps are part of the mercury vapour family of discharge lamps and must be handled with great care. The lamp operates at high pressure, and the slight risk of explosion of the lamp exists if operated over its recommended life. We recommend, therefore, that the lamp be replaced within the manufacturer’s specified lamp life.

**9. Lamp installation**

1. Use a suitable tool to loosen the four screws “A” which affix the lampholder cover at the rear of the projector.

2. Remove the lampholder cover “B”.

3. Identify the lampholder “C”.

![Image of lamp installation steps]
4. Insert the lamp and rotate clockwise. The lamp used is manufactured from quartz glass and should be handled with care; always adhere to the instructions supplied in the lamp's packaging. Never touch the glass directly, use the tissue provided in the lamp's packaging. DO NOT USE UNDUE FORCE.

5. Replace the lampholder cover in its original position and refasten the two screws "A" which were previously removed.

**ATTENTION!!**

Each time you change the lamp, we recommend the following be carried out:
- realign the lamp in the optical path to avoid overheating dichroics and/or effects.
- reset the lamp life counter (as described in section 8.7. Resetting the counter).

9.2. **Aligning the lamp in the optical path**

Aligning the lamp in the optical system is achieved via the 3 adjusters at the rear of the projector. This procedure should be undertaken to maximise output, properly align the lamp in the optical system and to avoid the possible overheating of the internal components due to the incorrect focusing of the beam onto components not intended to be exposed to this.

**Alignment procedure**

Alignment is effected by the 3 adjusters A, B and C located on the lampholder assembly. The lamp should be on, black-out and dimmer fully open, and no colours selected. If the lamp is not correctly aligned, a hot-spot will be readily noticeable. Using the 3 adjusters in unison, you will need to bring the hot-spot to the centre of the beam and then flatten the beam to maximum uniformity.
10. Removing the colour changer assembly

By removing the casing, complete access is available to the internals of the projector.

**ATTENTION!!**

Disconnect the unit from mains power prior to attempting lamp installation or replacement
Make sure the projector is sufficiently cooled.

1. Using an appropriate screwdriver, remove the screws “A” which affix the housings and remove it.
   To identify which part of the projector must be removed please position the unit so that the labels of the lampholder group are in the upright position. Now lock the unit by the locking device and remove the upper cover.

2. Using an appropriate screwdriver, remove the screws “B” which affix the colors changer and the connector “C”.

3. Remove the color changer assembly “D”.
   Now the assembly can be easy inspected.

**ATTENTION!!**

Handle with care the colour changer assembly to avoid damages on the dichroics filter.

5. Replace and fasten the assembly and the housings as per their original positions.
Whilst every possible precaution has been taken to ensure the trouble-free operation of your Infinity Wash XL, the following periodic maintenance is highly recommended.

**ATTENTION!!**

Always remove mains power and ensure the unit is sufficiently cooled prior to opening up the housing.

To gain access to the internals of the unit refer to chapter **10. Opening up the projector** of this manual.

### 11.1. Periodic cleaning

**Lenses and reflectors**

Even a fine layer of dust can reduce the luminous output substantially. Regularly clean all lenses and the reflector using a soft cotton cloth, dampened with a specialist lens cleaning solution.

**Fans and air passages**

The fans and air passages must be cleaned approximately every 6 weeks; the period for this periodic cleaning will depend, of course, upon the conditions in which the projector is operating. Suitable instruments for performing this type of maintenance are a brush and a common vacuum cleaner or an air compressor.

### 11.2. Periodic maintenance

**Lamp**

Check the lamp and replacing it if there is any observable damage or deformation due to heat.

**Mechanicals**

Periodically check all mechanical devices for wear and tear; gears, guides, belts, etc., replacing them if necessary. Periodically check the lubrication of all components, particularly the parts subject to high temperatures. If necessary, lubricate with suitable lubricant, available from your Coemar distributor.

**Electrical components**

Check all electrical components for correct earthing and proper attachment of all connectors, refastening if necessary.

### 11.3. Fuse replacement

Locate the fuse, which protects the lamp and electronics, in the base of the Infinity Wash XL.

Using a multimeter, test the condition of the fuse, replacing it with one of equivalent type if necessary.
11.4. Electronic motor alignment

**ATTENTION!!**

This procedure should only be undertaken by qualified and experienced technical personnel.

The display panel of the Infinity Wash XL allows for the electronic alignment of the projector’s motors in the optical system. This procedure is performed by Coemar at the factory. It may be useful to perform this procedure in the case of internal components being replaced.

Altering the factory settings may radically alter the functioning of the projector. Carefully read all of the following prior to attempting any changes.

Electronic calibration

**ATTENTION!!**

The alignment procedure can only be carried out when DMX 512 signal is connected.

1. Press the menu button and then enter to confirm.
2. Press the + or - button until FUNC is displayed. Then press enter.
3. Press the + or - button until RESE is displayed.
4. Press the enter and menu buttons simultaneously, holding them for at least 10". The motors will perform a reset and the display will show **PAN** confirming that you have entered electronic calibration mode.

Note: Simultaneously pressing the + and - buttons will return the calibration value to 128 (default).

12. Spare parts

All the components of the Infinity Wash XL are available as replacement spares from your authorised Coemar service centre. Accurate description of the fixture, model number, and type will assist us in providing for your requirements in an efficient and effective manner.
13. Error messages

**MBER:**
COMMUNICATION Error
This message indicates that the motherboard within the unit is not communicating properly with the control source. Check the connectors located on both boards.

**OPER:**
PAN ENCODER Error
This message indicates that there is a problem with the PAN encoders. Check the sensors on the encoder wheel located near the pan movement motor, as well as the relevant cabling.

**OTER:**
TILT ENCODER Error
This message indicates that there is a problem with the TILT encoder located on the fixture yoke. Check the sensors on the encoder wheel located near the pan movement motor, as well as the relevant cabling.

**EPER:**
EEPROM Error
The EEPROM is either defective or absent; refer to your Coemar service centre for a replacement component.

**DTER:**
DATA Error
The initial parameter settings are incorrect or corrupt; the projector has reloaded its factory default settings. Turn the projector off and on again. Should the error reoccur, refer the unit to your authorised Coemar service centre to have the EEPROM check and possibly replaced.

**ADER:**
DMX addressing Error
The projector is not receiving all DMX channels needed to operate correctly. Check the DMX address indicated on the display and the channel numbers being outputted from the controller. Note that not all controllers will output all 512 channels.

**S1ER:**
Control circuit error relating to position sensors for 4 motors located upper in the yoke (EFFECT):
Check for the presence of power to the PCB and the condition of the connectors and cabling between the PCB and the sensors. Additionally, check motors and/or cogs for any impediments as well as the proper position of the cabling connectors.

**S3ER:**
Control circuit error relating to position sensors for 5 motors (ZOOM):
Check for the presence of power to the PCB and the condition of the connectors and cabling between the PCB and the sensors. Additionally, check motors and/or cogs for any impediments as well as the proper position of the cabling connectors.

**S4ER:**
Control circuit error relating to position sensors for 4 motors located lower in the yoke (COLOR WHEEL):
Check for the presence of power to the PCB and the condition of the connectors and cabling between the PCB and the sensors. Additionally, check motors and/or cogs for any impediments as well as the proper position of the cabling connectors.

**COER:**
Position Error in COLOUR WHEEL
Check the functioning and correct positioning of the magnetic sensor of the colour wheel.

**EFER:**
Position Error in EFFECT WHEEL
Check the functioning and correct positioning of the magnetic sensor of the effects wheel.

**REER:**
Position Error in EFFECT INDEXING
Check the functioning and correct positioning of the magnetic sensor of the effects indexing.

**ZOER:**
Position Error in the ZOOM LENS carriage
Check the functioning and correct positioning of the magnetic sensor of the zoom lens carriage.

**ZEER:**
Position Error in the ZOOM EFFECT carriage
Check the functioning and correct positioning of the magnetic sensor of the zoom effect carriage.

**LEER:**
Position Error in the ZOOM LENS
Check the functioning and correct positioning of the magnetic sensor of the zoom lens.

**ER20 ÷ ER99:**
SYSTEM Error
Turn the unit off and on again. If the error persists, contact your authorised Coemar service centre.
## 14. Frequently asked questions

<table>
<thead>
<tr>
<th>Question</th>
<th>Possible cause</th>
<th>Possible solution</th>
</tr>
</thead>
<tbody>
<tr>
<td>The projector is completely immobile.</td>
<td>Projector not powered up.</td>
<td>Check that the mains power cable is connected to power.</td>
</tr>
<tr>
<td></td>
<td>The circuit breaker is switched off</td>
<td>Set the circuit breaker to ON.</td>
</tr>
<tr>
<td></td>
<td>The protection fuse is blown</td>
<td>Disconnect the projector and replace the fuse.</td>
</tr>
<tr>
<td>The projector resets correctly, but either does not respond, or responds incorrectly, to DMX signal.</td>
<td>Incorrect signal connection</td>
<td>Inspect the signal cable, rectify any incorrect wiring, repair or replace any damaged cables or connectors.</td>
</tr>
<tr>
<td></td>
<td>Incorrect DMX address</td>
<td>Check the DMX address.</td>
</tr>
<tr>
<td>The lamp turns off intermittently</td>
<td>The projector is too hot.</td>
<td>Let the fixture cool down.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Check that the air vents above the cooling fans are not obstructed and that the fans are working correctly.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Ensure that the ambient temperature is below 35 °C.</td>
</tr>
<tr>
<td></td>
<td></td>
<td>One of the fans does not work correctly and causes the overheating of the projector.</td>
